

Jordan 191 Masking Template

To use this template, print this page to your printer. Use the calibration bars below to make sure the sizing is correct - make sure the bars are the noted distance apart (1" top row, 1cm bottom row) If they do not match up to those measurements, adjust the scaling on your output until they come out the correct distance apart.

The shapes below are taken directly from the kit decals to insure an accurate mask.

Use these shapes to cut out your masking medium - you may need to lay out your masking medium on a CLEAN and DRY surface, sticky side down. Simply put these templates over your medium and use them as a guide to trim your medium. Whichever color you mask off first, I recommend keeping the other side of the medium to mask-off the other color later

For my build I used Tamiya TS44 Brilliant Blue, TS22 Light Green and Krylon Emerald Green
